Subject Index of Volume 169

Adhesion

- preparation by diffusion bonding and adhesive bonding of aluminum alloy specimens for fracture toughness and fatigue crack growth resistance measurements in different orientations, L13

Alloys

- effect of molybdenum on the resistance to H_2S of high sulphur microalloyed steels, 111
- elaboration and characterization of new low temperature shape memory Cu–Al–Be alloys, 119
- estimation of energy-dissipative process development during crack propagation in an intermetallic alloy, L9
- fracture behaviour of an aluminide coating on a single crystal nickel base superalloy, 19
- mechanical properties and microstructural evolution of a cobalt base alloy coating, 85
- microstructural evolution and thermal stability of precipitation-strengthened Cu–8Cr–4Nb alloy, 167
- microstructure in rapidly solidified Al–Ti alloys, 135
- Monte Carlo analysis of short-range order in nitrogen-strengthened Fe–Ni–Cr–N austenitic alloys, 103
- predicting slip behavior in alloys containing shearable and strong particles, 33
- preparation by diffusion bonding and adhesive bonding of aluminum alloy specimens for fracture toughness and fatigue crack growth resistance measurements in different orientations, L13
- pressure die cast graphite dispersed Al–Si–Mg alloy matrix composites, 93
- structure and properties of Fe-based nanocrystalline alloys containing a small amount of transition elements, L17
- the effect of homogenization and precipitation treatments on the extrudability and ambient-temperature mechanical properties of aluminum alloy AA2024, 9
- work hardening of mechanically alloyed Fe– Y_2O_3 alloys, 1

Alumina

- effect of magnesium on mechanical properties of alumina-fiber-reinforced aluminum matrix composites formed by pressure infiltration casting, 79

Aluminides

- fracture behaviour of an aluminide coating on a single crystal nickel base superalloy, 19

Aluminium

- effect of magnesium on mechanical properties of alumina-fiber-reinforced aluminum matrix composites formed by pressure infiltration casting, 79
- elaboration and characterization of new low temperature shape memory Cu–Al–Be alloys, 119
- microstructure in rapidly solidified Al–Ti alloys, 135
- preparation by diffusion bonding and adhesive bonding of aluminum alloy specimens for fracture toughness and fatigue crack growth resistance measurements in different orientations, L13
- pressure die cast graphite dispersed Al–Si–Mg alloy matrix composites, 93
- reactions in Al_2O_3 –Mg metal matrix composites during prolonged heat treatment at 400, 500 and 600 °C, 149

- the effect of homogenization and precipitation treatments on the extrudability and ambient-temperature mechanical properties of aluminum alloy AA2024, 9

Anisotropy

- elastic stresses in anisotropic bicrystals, 43

Austenite

- Monte Carlo analysis of short-range order in nitrogen-strengthened Fe–Ni–Cr–N austenitic alloys, 103

Beryllium

- elaboration and characterization of new low temperature shape memory Cu–Al–Be alloys, 119

Ceramics

- plasma etching of structural ceramics for microstructural analysis, L5

Chromium

- microstructural evolution and thermal stability of precipitation-strengthened Cu–8Cr–4Nb alloy, 167
- Monte Carlo analysis of short-range order in nitrogen-strengthened Fe–Ni–Cr–N austenitic alloys, 103

Coarsening

- stability bifurcation against coarsening in elastically constrained many-particle systems, 159

Coatings

- fracture behaviour of an aluminide coating on a single crystal nickel base superalloy, 19
- mechanical properties and microstructural evolution of a cobalt base alloy coating, 85

Cobalt

- mechanical properties and microstructural evolution of a cobalt base alloy coating, 85

Composites

- pressure die cast graphite dispersed Al–Si–Mg alloy matrix composites, 93

Copper

- creep of copper in the temperature range 423–623 K, 27
- elaboration and characterization of new low temperature shape memory Cu–Al–Be alloys, 119
- microstructural evolution and thermal stability of precipitation-strengthened Cu–8Cr–4Nb alloy, 167

Cracking

- estimation of energy-dissipative process development during crack propagation in an intermetallic alloy, L9

Creep

- creep of copper in the temperature range 423–623 K, 27

Crystals

- elastic stresses in anisotropic bicrystals, 43
- fracture behaviour of an aluminide coating on a single crystal nickel base superalloy, 19

Cyclic behaviour

- effect of grain size and intergranular stresses on the cyclic behaviour of a ferritic steel, 67

Deformation

- on the kinetical interaction of high-temperature deformation mechanisms, 99
- the irreversible deformation of a duplex stainless steel under thermal cycling, 125

Diffusion

- preparation by diffusion bonding and adhesive bonding of aluminum alloy specimens for fracture toughness and fatigue crack growth resistance measurements in different orientations, L13

Elasticity

- elastic stresses in anisotropic bicrystals, 43
- stability bifurcation against coarsening in elastically constrained many-particle systems, 159

Fatigue

- preparation by diffusion bonding and adhesive bonding of aluminum alloy specimens for fracture toughness and fatigue crack growth resistance measurements in different orientations, L13

Ferrites

- effect of grain size and intergranular stresses on the cyclic behaviour of a ferritic steel, 67

Fibre reinforcement

- effect of magnesium on mechanical properties of alumina-fiber-reinforced aluminum matrix composites formed by pressure infiltration casting, 79

Fracture

- fracture behaviour of an aluminide coating on a single crystal nickel base superalloy, 19
- preparation by diffusion bonding and adhesive bonding of aluminum alloy specimens for fracture toughness and fatigue crack growth resistance measurements in different orientations, L13

Fragmentation

- structures obtained by mechanical fragmentation of glass plates, L1

Glass

- structures obtained by mechanical fragmentation of glass plates, L1

Grain size

- effect of grain size and intergranular stresses on the cyclic behaviour of a ferritic steel, 67

Graphite

- pressure die cast graphite dispersed Al-Si-Mg alloy matrix composites, 93

Heat treatment

- reactions in Al_2O_3 -Mg metal matrix composites during prolonged heat treatment at 400, 500 and 600 °C, 149

Homogenization

- the effect of homogenization and precipitation treatments on the extrudability and ambient-temperature mechanical properties of aluminum alloy AA2024, 9

Hydrogen

- effect of molybdenum on the resistance to H_2S of high sulphur microalloyed steels, 111

Infiltration

- effect of magnesium on mechanical properties of alumina-fiber-reinforced aluminum matrix composites formed by pressure infiltration casting, 79

Intermetallics

- estimation of energy-dissipative process development during crack propagation in an intermetallic alloy, L9

Iron

- Monte Carlo analysis of short-range order in nitrogen-strengthened Fe-Ni-Cr-N austenitic alloys, 103
- structure and properties of Fe-based nanocrystalline alloys containing a small amount of transition elements, L17
- work hardening of mechanically alloyed Fe- Y_2O_3 alloys, 1

Kinetical interaction

- on the kinetical interaction of high-temperature deformation mechanisms, 99

Magnesium

- effect of magnesium on mechanical properties of alumina-fiber-reinforced aluminum matrix composites formed by pressure infiltration casting, 79
- pressure die cast graphite dispersed Al-Si-Mg alloy matrix composites, 93

Many-particle systems

- stability bifurcation against coarsening in elastically constrained many-particle systems, 159

Mechanical alloying

- work hardening of mechanically alloyed Fe- Y_2O_3 alloys, 1

Mechanical properties

- effect of magnesium on mechanical properties of alumina-fiber-reinforced aluminum matrix composites formed by pressure infiltration casting, 79
- mechanical properties and microstructural evolution of a cobalt base alloy coating, 85
- the effect of homogenization and precipitation treatments on the extrudability and ambient-temperature mechanical properties of aluminum alloy AA2024, 9
- the effects of small titanium additions on the mechanical properties and the microstructures of controlled rolled niobium-bearing HSLA plate steels, 53

Metal matrix composites

- reactions in Al_2O_3 -Mg metal matrix composites during prolonged heat treatment at 400, 500 and 600 °C, 149

Microstructural evolution

- mechanical properties and microstructural evolution of a cobalt base alloy coating, 85

Molybdenum

- effect of molybdenum on the resistance to H_2S of high sulphur microalloyed steels, 111

Nickel

- fracture behaviour of an aluminide coating on a single crystal nickel base superalloy, 19
- Monte Carlo analysis of short-range order in nitrogen-strengthened Fe-Ni-Cr-N austenitic alloys, 103

Niobium

- microstructural evolution and thermal stability of precipitation-strengthened Cu-8Cr-4Nb alloy, 167
- the effects of small titanium additions on the mechanical properties and the microstructures of controlled rolled niobium-bearing HSLA plate steels, 53

Nitrogen

- Monte Carlo analysis of short-range order in nitrogen-strengthened Fe-Ni-Cr-N austenitic alloys, 103

Oxygen

- reactions in Al_2O_3 -Mg metal matrix composites during prolonged heat treatment at 400, 500 and 600 °C, 149
- work hardening of mechanically alloyed Fe- Y_2O_3 alloys, 1

Plasma etching

- plasma etching of structural ceramics for microstructural analysis, L5

Precipitation

- microstructural evolution and thermal stability of precipitation-strengthened Cu-8Cr-4Nb alloy, 167
- the effect of homogenization and precipitation treatments on the extrudability and ambient-temperature mechanical properties of aluminum alloy AA2024, 9

Rapid solidification

- microstructure in rapidly solidified Al-Ti alloys, 135

Rolling

- the effects of small titanium additions on the mechanical properties and the microstructures of controlled rolled niobium-bearing HSLA plate steels, 53

Shape memory alloys

- elaboration and characterization of new low temperature shape memory Cu-Al-Be alloys, 119

Shearing

- predicting slip behavior in alloys containing shearable and strong particles, 33

Silicon

- pressure die cast graphite dispersed Al-Si-Mg alloy matrix composites, 93

Slip

- predicting slip behavior in alloys containing shearable and strong particles, 33

Steels

- effect of grain size and intergranular stresses on the cyclic behaviour of a ferritic steel, 67
- effect of molybdenum on the resistance to H₂S of high sulphur microalloyed steels, 111

- the effects of small titanium additions on the mechanical properties and the microstructures of controlled rolled niobium-bearing HSLA plate steels, 53
- the irreversible deformation of a duplex stainless steel under thermal cycling, 125

Stress

- effect of grain size and intergranular stresses on the cyclic behaviour of a ferritic steel, 67
- elastic stresses in anisotropic bicrystals, 43

Sulphur

- effect of molybdenum on the resistance to H₂S of high sulphur microalloyed steels, 111

Thermal cycling

- the irreversible deformation of a duplex stainless steel under thermal cycling, 125

Thermal stability

- microstructural evolution and thermal stability of precipitation-strengthened Cu-8Cr-4Nb alloy, 167

Titanium

- microstructure in rapidly solidified Al-Ti alloys, 135
- the effects of small titanium additions on the mechanical properties and the microstructures of controlled rolled niobium-bearing HSLA plate steels, 53

Transmission elements

- structure and properties of Fe-based nanocrystalline alloys containing a small amount of transition elements, L17

Work hardening

- work hardening of mechanically alloyed Fe-Y₂O₃ alloys, 1

Yttrium

- work hardening of mechanically alloyed Fe-Y₂O₃ alloys, 1
